

Team Number: Section 022 - 3

Team Name: GitLit

Team Members: Sophia Eisner, Adam Chehadi, Samyak Ghimire, Evan Banks, Raanee Smith

Application Name: Your Night Out

Project Features List:

1. **Personalized Date Night Preferences:** Users will have the option to provide preferences for the types of restaurant they like, and what genre of movie they enjoy watching.
2. **Personalized Dinner Date Options:** Based on the user's location and preferences, our application will provide the user with a list of restaurants nearby, and if necessary, a Yelp/OpenTable link to make a reservation.
3. **Generated Directions:** Once the restaurant is selected, our application will ask the user to provide an estimate of how long they will spend at the restaurant eating. With this information, our application will utilize Google Maps to provide driving directions and ETA to the nearest movie theatre.
4. **Personalized Theater Options:** Based on the time the user will arrive at the movie theater and their preferences, our application will provide a list of films playing at the movie theater and a Fandango link to reserve tickets/seats.
5. **Personalized Date Itinerary:** After the restaurant, driving, and movie information have been selected, our application will provide the user with a full itinerary for their date night.

Requirements (ADAM):

- For this milestone, you will add user stories pertaining to each feature listed above and prioritise them by weighing the criticality of each user story.

Project Plan (Samyak, Raanee, Evan):

Link - <https://trello.com/invite/b/s7PPKewu/a9c99c33d8fa64d29d0c9a2649c63d82/date-night>

Wireframes & Design (Sophia):

- Design Framework: Bootstrap

Your Night Out

Your one-stop platform for a custom generated night out to dinner and the movies with a special someone, based on your preferences.

Individual Contributions:

- This deliverable includes a couple of lines about each team member's contribution towards the project.
- Include a link to the latest commit made by each team member on the GitHub repository. You should have started adding your work to GitHub already. At this point, this does not necessarily have to be code. It could be supplementary work done for the project as well - wireframes, tutorials etc.
- Share a link of the project management board being maintained for this project indicating the status of the tasks at hand.

Sophia: Created prototype design for UI of app

Evan: Worked on project plan

Adam: Created user stories for our app

Raane: So far for the project I have created a kanban board using trello for our project management system. I created different tasks that I thought would be necessary for fulfilling our project needs. Along with this I added various tutorials on things we plan to use to code our project and get it functioning and updated some user stories.

Samyak: Worked on project plan
